The following problems involve the integration of rational functions, resulting in logarithmic or inverse tangent functions. We will assume knowledge of the . The best way to guess the antiderivative in this case is to try multiplying the logarithm by and then taking the derivative. You can quickly evaluate the derivative of the . So the answer is $ex^3 + c$. Example 2: Integrate . Solution: First, split the function into two parts, so that we get:
Example 3: Integrate $\int \ln x \, dx$. Solution: Let. $u = \ln u$.
